

SynerPro[®] PBO

Insecticide Synergist

Features & Benefits

- Can be utilized in ground application sprayers, hand-held sprayers, power sprayers, foggers, ULV applicators, or by chemigation.
- Is intended for tank mixing with Pyrethroids, Carbamates, Abamectin, and most other insecticides.

SynerPro PBO is an emulsifiable concentrate for use as an additive in insecticides and acaricides to improve efficacy on insects and mites.

SynerPro PBO increases the rate of eliminating pests and aids in getting the ultimate control from pyrethroids, and most other insecticides.

As a synergist in a tank mix, SynerPro PBO blocks metabolic systems that would otherwise break down insecticide molecules.

SynerPro PBO interferes with the detoxication of insecticides by insects, a resistance management process directly related to an enzyme-inhibiting action. SynerPro PBO therefore restores the vulnerability of insects to the chemical, which would otherwise require higher levels of a toxicant for their control. On its own, SynerPro PBO has no insecticidal effect.

Formulation

Piperonyl Butoxide 91.3%

Packaging

6 x 1 Quart (80 cases/pallet)
4 x 1 gallon (48 cases/pallet)

Application Sites

Residential dwelling or indoors in commercial or industrial buildings, turf and ornamentals, crops, on livestock, livestock housing
